Baseline IT and MS Office Assessment

Time Allowed: 75 Minutes
Instructions: Please read all instructions carefully. This is a practical, task-based assessment designed to test your digital fluency. You must perform the following tasks on your computer: Attention to detail is critical.

TASK 1: File, Folder and OS Management

1. Navigate to your computer's **Desktop**.
2. Create a new main folder. Rename it using this exact format: `[Your First Name]_[Your Last Name]_Data_Assessment`.
3. Inside this main folder, create three sub-folders named:
    - `01_Documents`
    - `02_Spreadsheets`
    - `03_Presentations`
4. Open **Notepad** (or any basic text editor). Type the sentence: *"I am ready to begin my Data Analytics journey."*
5. Save this text file as `Declaration.txt` directly inside the main folder (not in the sub-folders).

TASK 2: System Specifications and Storage

1. Open your computer's **System Settings** or **System Information** page to display your Processor, RAM, and Windows/OS version.
2. Take a **screenshot** of this window. Save it as `System_Specs.png`.
3. Open your **File Explorer** and navigate to "This PC" (or "My Computer") to view your hard drive storage capacity (e.g., Local Disk C:).
4. Take a **screenshot** of this view. Save it as `Storage_Capacity.png`.
5. Move both screenshot files into the `01_Documents` sub-folder.

TASK 3: Microsoft Word

1. Open **Microsoft Word** and create a Blank Document.
2. Type the document title: **"Technology and Data in Modern Business"**.

3. Format the title: **Center-aligned**, **Bold**, **Size 18**, font **Calibri**, and change the font color to **Dark Blue**.
4. Press Enter and change the alignment back to **Left-aligned**, Size 11, font color Black.
5. Write a short paragraph (minimum 50 words) about a technology tool you use daily and why it is important.
6. Format the paragraph so that it has **1.5 Line Spacing** and is **Justified**.
7. Insert a basic **Shape** (e.g., a star, arrow, or rectangle) anywhere below the paragraph.
8. Save the document as `Tech_Review.docx` inside your `01_Documents` folder.
9. Save a second copy of this document as a **PDF file** named `Tech_Review.pdf` in the same folder.

TASK 4: Microsoft Excel

1. Open **Microsoft Excel** and create a Blank Workbook.
2. Rename "Sheet1" to **"Q1_Production"**.
3. Create the following data table exactly as shown below, starting in cell A1:

Region	Daily Barrels	Operating Status
Delta	1500	Active
Rivers	2200	Active
Bayelsa	800	Maintenance
Akwa Ibom	3100	Active
Edo	950	Maintenance

4. **Formatting:** Make Row 1 (headers) **Bold** with a **Light Gray background color**. Apply **All Borders** to the entire table (A1 to C6).
5. **Formulas:**
    - In cell **A8**, type **"Total Production"**. In cell **B8**, use a formula (`=SUM`) to calculate the total Daily Barrels.
    - In cell **A9**, type **"Average Production"**. In cell **B9**, use a formula (`=AVERAGE`) to calculate the average.
6. **Sorting:** Select the data in your table (A2 to C6) and **Sort** it by `Daily Barrels` from **Largest to Smallest**. *(Note: Ensure the regions move with their respective numbers!)*
7. **Conditional Formatting:** Apply conditional formatting to the `Operating Status` column so that any cell containing the word "Maintenance" automatically turns **Red** (text or background).
8. **Charting:** Highlight the `Region` and `Daily Barrels` columns. Insert a **2D Column Chart** (Bar Chart). Place the chart next to your data.
9. Save the workbook as `Operations_Data.xlsx` inside your `02_Spreadsheets` folder.

TASK 5: Microsoft PowerPoint

1. Open **Microsoft PowerPoint** and create a Blank Presentation.
2. Apply any built-in **Design Theme** to the presentation.
3. On **Slide 1 (Title Slide)**:
    - Title: **"Data Analytics Overview"**
    - Subtitle: **"[Your Full Name]"**
4. Insert **Slide 2 (Title and Content layout)**:
    - Title: **"Top Analytical Skills"**
    - Content: Create a **Numbered List** (1, 2, 3) of three data skills you hope to learn.
5. Insert **Slide 3 (Blank Layout)**:
    - Go to "Insert" and add a **SmartArt Graphic** (choose any Process, Hierarchy, or Cycle graphic). Add some brief sample text into the graphic.
6. Apply a **Slide Transition** (e.g., Fade, Push, Wipe) to all slides.
7. Save the presentation as `Data_Pitch.pptx` in your `03_Presentations` folder.

TASK 6: File Compression and Email Submission

1. Close all open Word, Excel, and PowerPoint applications.
2. Go back to your Desktop. Right-click your main folder (`[Your First Name]_[Your Last Name]_Data_Assessment`).
3. Compress the folder into a **.zip file** (e.g., right-click -> "Compress to ZIP file").

4. Open your web browser and log into your email account.
5. Compose a new email:
    - **To:** [Instructor/Assessor Email Address Here]
    - **Subject:** `Submission: Advanced Baseline - [Your Full Name]`
    - **Body:** Write a 2-3 sentence professional email stating that you have completed the test and attached the requested files. Ensure you include a professional sign-off (e.g., "Best regards, [Your Name]").
    - **Attachment:** Attach the `.zip` file you just created.
6. Send the email.
